INTRODUCTORY

WE take pleasure in presenting to our friends this catalogue, showing a large variety of selected, classified designs, of stamped steel for ceiling and side walls. Our patterns are new and original, and admit of the highest degree of ornamentation.

Having just erected new factories, installed new machinery and using none but the best grade of steel, from our own mills, we are producing a line of plates that are superior in every detail of construction, quality, and appearance, and respectfully solicit your inquiries.

THE SHEET METAL MFG. CO.,
NILES, OHIO.

AVERY LIBRARY
COLUMBIA UNIVERSITY

SPECIAL NOTICES

Prices quoted do not include furring strips nor nails; same will not be shipped unless ordered. When furring strips are wanted, we will furnish them of standard sizes; viz: ⅞ x ⅞ inches or 1¼ x ⅞ inches, at the lowest possible price, and would suggest the smaller size for plastered ceilings and the larger when applying to joists direct. No furring strips are required on sheathed surfaces. No double furring is necessary with OUR ceilings.

All quotations include cone head nails for applying metal, also wood brackets for cornice.

The weight of 100 square feet of ceiling or wall material, crated, ready for shipment, is about 65 pounds.

Our plates are all resquared, making them easy to apply and sure to fit perfectly. They receive a coat of our specially prepared ceiling paint, which takes the place of a priming coat after ceiling is erected, and also protects them while in transit.

A number of our plates are made with moldings attached (see No. 3160) which lowers the cost of erection and makes fewer joints.

Our product is all made with the "Invisible Lap Joint".

The wall designs show a metal base finish, which is not furnished unless specially ordered.

Our Combination Designs are all made to scale ¾-inch equals 1 foot.

RULES FOR MEASURING

The area of a ceiling is found by adding twice the vertical height of cornice to the full length and breadth of the room, and multiplying the length and breadth thus obtained together, making no deductions for any openings less than 75 square feet, as fitting around openings is as expensive as covering them.

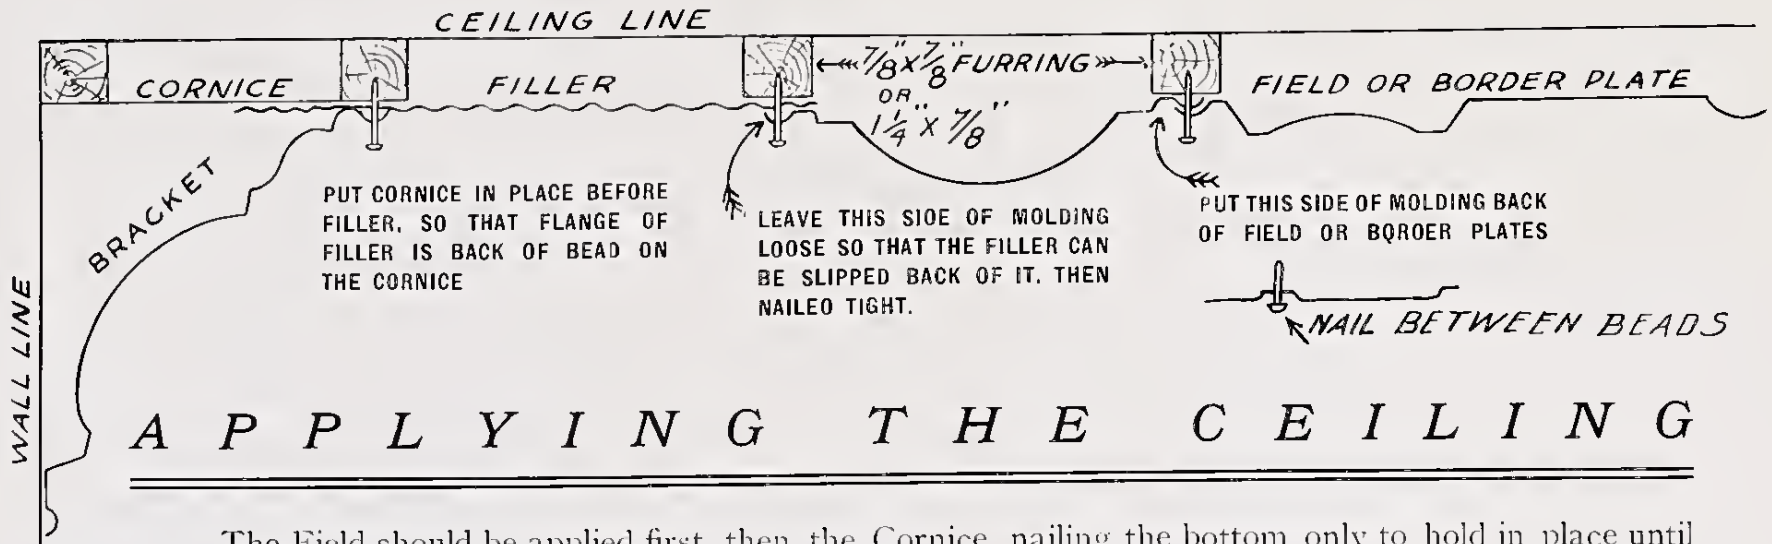

In reporting measurements for estimates, both sides and both ends should be given, as buildings are frequently out of square. For side walls, be sure to locate doors, vestibules, chimneys and other offsets, if any.

Always give height of walls and baseboard.

A ceiling cannot be fitted to accommodate gas and electric light drops, but all such fixtures must be placed so as to conform with the drawing and arrangement of the ceiling.

TERMS

Net cash in 30 days or 2 per cent. discount is allowed, if paid within 10 days from date of invoice. Parties without satisfactory commercial credit rating, will please send acceptable reference, or, if preferred, they may forward cash with order, less 2 per cent.

A P P L Y I N G T H E C E I L I N G

The Field should be applied first, then the Cornice, nailing the bottom only to hold in place until Mold, Border, or Filler is applied, as the case may be.

Beginning at one corner apply the ceiling plates across and along the room, keeping the lapping edges running from the light. Each pieee should be carefully lapped so the beads will be straight and true, the joints will then become invisible. The plates should be nailed at about 6 inch intervals with small cone head nails. Use a sharp punch for making nail holes where there are more than two thicknesses of metal. The filler plate is cut to the proper width and placed under the member on the side away from the cornice.

Close or "swedge" with a small dull tool any joints whieh may not have lapped tightly owing to the lapping beads having been bent or flattened in applying.

The following is to assist ceiling erectors in estimating the quantity of furring strips for each 100 square feet of surfaee covered, the quantities representing the stripping for the field portion only; additional to same the necessary quantity of strips for molding, filler, and cornice must be added. The size of molding, filler, and cornice is a determining factor in the quantity required.

If strips are placed 24 inches on eenters lengthwise and 24 inches on centers crosswise, the room will require 105 lineal feet.

If strips are placed 24 inches on centers lengthwise and 48 inches on eenters crosswise, the room will require 80 lineal feet.

If strips are placed 24 inches on centers lengthwise and 96 inches on centers crosswise, the room will require 67 lineal feet.

If strips are placed 12 inches on centers lengthwise and 96 inches on centers crosswise, the room will require 117 lineal feet.
